Second Order Differential Equations

Second Order Differential Equations solutions of a linear, homogeneous second order differential equation then the general solution $y_{cf}(x)$, is $y_{cf}(x) = Ay_1(x) + By_2(x)$ where A, B are constants We see that the second order linear ordinary differential equation has two arbitrary constants in its general solution The functions $y_1(x)$ and $y_2(x)$ are linearly independent if one is not a

Section 10.1: Solutions of Differential Equations

Constant solutions In general, a solution to a differential equation is a function However, the function could be a constant function For example, all solutions to the equation $y' = 0$ are constant There are nontrivial differential equations which have some constant solutions 8

Partial Differential Equations: An Introduction, 2nd Edition

analysis of the solutions of the equations One of the most important techniques is the method of separation of variables Many textbooks heavily emphasize this technique to the point of excluding other points of view The problem with that approach is that only certain kinds of partial differential equations can be solved by it, whereas others
